Software Engineer | MERN & Next.js Developer

Software Engineer building scalable, reliable, and user-focused digital solutions for real-world business needs. Currently working on production-grade applications, intelligent automation, and complex enterprise systems. Passionate about modern software engineering, AI-driven innovation, and creating impactful products that improve efficiency and user experience.

EDUCATION

University of the Punjab (FCIT) Lahore, Punjab, Pakistan
Bachelor of Science in Software Engineering | CGPA: 3.54

Dec 2022 – June 2026

EXPERIENCE

Software Engineer - Texinnova Axis

April 2026 – Present

- Develop and maintain scalable **ERP** features using modern frontend (React.js) and backend (Golang, Java, Typesense) technologies, with a focus on **finance**, inventory, sales, and **operational workflows**.
- Collaborate with cross-functional teams to improve system performance, resolve complex issues, and deliver reliable, user-focused solutions.

Full Stack Developer Intern - Musketeers Tech

July 2025 – Sep 2025

- Built and deployed 7+ production-ready **full-stack applications** across **AI**, **e-commerce** and **property management** using Next.js, PostgreSQL, MongoDB, AWS S3, and Shaden.
- Developed AI-powered automation **workflows** that reduced manual effort, improved engineering efficiency, and enabled users to record complete workflows through **voice commands**.

TECHNICAL SKILLS

Frontend: React, Next.js, Remix, Tailwind

Backend: Node.js, Nest.js, REST APIs, FastAPI

Databases: PostgreSQL, MongoDB, MySQL, Firebase, Supabase

Languages: JavaScript, TypeScript, Python, C++, C#, Java, Golang

Tools/Cloud: Docker, Git, JIRA, Figma, Cloudinary, Amazon S3, Typesense

PROJECTS

- FYP – A Unified Scholarship and Mentorship Platform (Next.js, Nest.js, FastAPI):**
Built an automated platform to scrape, aggregate, and list scholarships, guiding students through the application process by connecting them with mentors and communities, improving accessibility and reducing manual search effort. [View](#)
- Rent & Home (Next.js, Cloudinary, Next-intl, Leaflet):**
Makes property discovery and posting seamless, which offers **precise location filtering** improving search accuracy around 40%, optimized image handling, **internationalized UI**, and **dashboards** for efficient listing management. Scalable and adaptable, it's designed for multi-market deployment. [GitHub](#)
- AI Code-Lab (Next.js, OpenAI, Monaco Editor):**
AI-CodeLab redefines coding practice by generating unique **daily challenges**. Users code and submit solutions to receive **real-time results** and **scores**, with gamified progress tracking and rankings. Real-time code execution enhances engagement, making skill-building competitive, personalized, and fun. [GitHub](#)
- Realtime Chat App (MERN, Socket.io):**
Real-Time Chat App delivers seamless, WhatsApp-like messaging with **real-time online status**, **image uploads**, and **secure authentication**. Designed for multiple concurrent users, it combines intuitive frontend interactions with robust backend logic, production-ready communication. [GitHub](#)
